

Emily's Résumé

IGN: OhEmillyyy

Discord: @OhEmillyy // 1057312650381504543

Name: Emily

Email: emily@bunni.me

Age: 22

TimeZone: EST

Website: <https://www.bunni.me/>

General Summary

I am a self-driven, diligent, cheerful, and compassionate individual who has learned a diverse range of skills through experiences in staffing, professional development and system administration over three years of dedicated engagement in the world of Minecraft development. My forte lies in management abilities, honed through administration of multiple networks and services. I possess a solid grasp of essential employability skills, recognizing the role of collaboration and continual learning from my peers.

With six years of hands-on experience in the realm of Linux, I find Debian to be my preferred operating system for system administration; I am also learning Enterprise Linux distributions such as Rocky and RedHat. My development extends to a range of skills, including 1-3 years of practical experience in JavaScript, with a particular affinity for libraries such as NodeJS and ExpressJS.

I'm actively pursuing certification in Ethical Hacking and Penetration Testing. I already possess considerable knowledge of red versus blue scenarios and have actively participated in various King of the Hill and Capture The Flag challenges while studying Ethical Hacking.

Personal Skills

- Customer Support
- Dispute Resolution
- Leadership
- Staff Management
- Community Management

- Systems Administration
- Frontend & Backend Development
- Software Development
- Penetration Testing

Employment History

This is update to date as of: October 31st 2023

Link to Project: [Website](#)

- Manage and work on clients infrastructure
- Be on standby for Disaster Recovery
- Help with documents if needed

Personal Attributes

- ❖ **Communication Skills:** As an integral part of my network employment, I understand the importance of effective communication in collaborating with colleagues and ensuring smooth operations.
- ❖ **Compassion:** I believe that compassion is a cornerstone of effective leadership. It not only sets a positive example but also encourages open and honest communication, fostering a supportive work environment.
- ❖ **Willingness to Learn:** I have an insatiable thirst for knowledge and actively seek opportunities to learn from others, valuing their insights and suggestions to enhance my expertise.
- ❖ **Adaptability:** I possess a natural ability to adapt seamlessly to new situations and changing circumstances, recognizing the dynamic nature of work environments and embracing unforeseen challenges.
- ❖ **Resilience:** I embrace life's uncertainties and understand that not everything goes as planned. I thrive on overcoming obstacles, viewing them as opportunities for personal growth and improvement, enabling me to excel in the face of adversity.

Some of My OSS Projects

[Cesium](#) - Discord Bot with vultrex Integration (JavaScript)

Cesium is one of my first coded Discord bots coded in JavaScript that leverages the power of the Vultrex API for managing user levels and hosting giveaways. Originally conceived as a project within SolexGames, I later made the decision to open source it for a wider community of users. Cesium enhances Discord server functionality by offering dynamic features and interactions, making it a valuable addition to the online community.

PhantomShell - Customized Bash Interpreter and Linux Service Manager

PhantomShell was a specialized, (now closed-sourced) iteration of the Bash interpreter, meticulously crafted to cater to the intricacies of Linux service management. I do think I should say that the core Bash functionality remains unaltered, with modifications centered around packages and services related to Bash. PhantomShell was forked from the Artemis Shell project initiated by Dani, demonstrating my ability to adapt and improve existing solutions to suit specific needs.

[BunniSite v1](#) - Website for portfolio purposes

This website was coded in javascript and serves as a dynamic online platform. It features an API that fetches users' Discord statuses and their currently played Spotify songs and VSC

status. This project exemplifies my web development skills and ability to create interactive web applications, providing users with engaging and informative experiences.

[Hynax](#) - Open Source AIO Discord Bot (JavaScript)

Hynax is an open-source Discord bot developed in JavaScript, designed to enhance users server functionality with a wide range of features including announcements, verification, information panels, polls, moderation, automoderation, message purging, reaction roles, reporting, and a ticket system. This bot uses keyv mainly mongodb to function for storing data such as tickets. There is a recode of this bot in Typescript that is actively maintained and is for sale. This project was open sourced to showcase my collaboration, JavaScript programming skills.

Testimonials Vouches References

"ItzBunni (Emily) She is just an intelligent person for what she does, She will help with anything that she can manage, When I owned Envo she gave the most time she could give and always was there to help with the server & just in general. Emily is a very productive person, Her skills are impeccable. She is well known when it comes to her System administration She is also a wholesome person and said again a very productive person."

- Bawaan#0459 // 254718997583495169

"Emily is a very hard working individual. She is always willing to assist you and give you helpful advice when needed. Her most notable attributes are being honest and productive at all times. Emily is currently employed at my server and always sets time aside to help and assist the server. She replies instantly whenever I message her about a concern and double checks all her security measures. Emily is someone you want and need on your server because of her knowledge and productivity. I give Emily a huge vouch and thumbs up!"

- ThatsWhack#0823 // 395789005633093643

"Emily was very attentive to Aura and helped in whatever way she could whether it would benefit her or not. She has a good mindset with using her knowledge on system

administration to help others secure their dedicated servers/VPS. I give Emily a huge vouch because she's hard-working and a very notable system administrator"

-@LBuddyBoy // 286976169172008960

"Vouch for Emily (1057312650381504543)- has done a great job in assisting me when it comes to maintaining backend services at Scala & our operated networks. (PvPBar, Verio)"

-@growlygg // 559497100296060939

"I am the Owner & Founder of the Esta Network, and my server has went through many ups and downs, and whilst during one of the downs, Emily went out of her way to help us get back on our feet, I am more than thankful and grateful that she did this for us, Emily is a knowledgeable person and an incredible system administrator, as well as always reliable in every situation that we've encountered. I would highly recommend Emily to anybody who is in need of a system administrator, website developer, and or discord bot developer."

- @tdvne // 1014884454847746058

@daniwasonline // 181944866987704320 (CEO of Hydride)

@tomassystems // 683781987726917663 (COO of Hydride & CEO of Volteric/TomasSystems)

"Emily is one of the best system admins that I ever came into contact with. I have personally owned and staffed on projects that used her as a system admin and not once was there any issues with the service and the system was entirely secure. Emily has mastered the system administration space and is very good at what she does. Definitely recommend."
